

# The Characteristics of Plants

Vascular plants are broken down into 3 groups:

- 1) Seedless vascular plants (ferns, horsetails and clubmosses)
- 2) Naked seed vascular plants (conifers, cycads and ginkos) – gymnosperms
- 3) Protected seed vascular plants (flowering plants, grasses and deciduous trees) – angiosperms

Nonvascular plants (mosses, liverworts and hornworts) – bryophytes
