

# Natural Science School Programs for K-6th

School Programs include slide show assemblies (or power point) followed by classroom visits illustrating habitat posters. Visits include a book signing with author, illustrator, Sheri Amsel.

**Habitats of the World** - Learn about our planet's desert, grassland, mountain and rain forest habitats. Learn where all your favorite animals live and find out which are in danger of disappearing forever. See examples of camouflage, adaptations, nocturnal life, predators and their prey, life cycles and food webs in each habitat.

This workshop includes one (or more) slide (or power point) shows featuring illustrations from the *Habitats of the World* series by Sheri Amsel, special photos of rare and endangered animals from all over the world, and a trip into the Amazon rain forest in Brazil in search of the mysterious Amazon River Dolphin. We also take a look at how book illustrations are made from photo reference to book art. This performance can be followed by individual classroom visits where each student will illustrate their own habitat poster.

This workshop is designed to enhance understanding of world geography, habitats, plant and animal natural history and how books are made. It is designed to follow curriculum guidelines for k-6, but has also been found to be appealing to older age groups. It can be adapted upon request.

The workshop also includes a book sale and signing offering several of the author's books at special educational prices.

**Classroom Habitat Poster Illustration** Schools can opt for 1-2 slide shows followed by up to four 30-minute classroom visits where kids each learn to draw a natural habitat (wetland, desert or rain forest available) or food web. For younger classes k-1, kids learn to draw animals on a simpler format.

Cost for full day program is \$600 plus travel expenses. Several area schools can arrange for week long residencies to split travel expenses. Please call to discuss how to arrange a multi-school residency in your district.
